From High Bills to High Savings: Why More Homeowners Are Leasing Solar

Many homeowners postpone (often indefinitely) transitioning to solar power because they are haunted by Uncle Bill’s 10-year old story about the unexpected lien on his home when he decided to sell, or 80-year old grandma Shirley who was fast-talked into taking on a \$40K solar loan. Admittedly, there are far too many stories like these – but this certainly does NOT have to be yours!

Times have DRAMATICALLY changed, thank goodness.

YOUR DESIRES ARE IMPORTANT TO US. We want to gain greater insights about your aspirations to live a greener, leaner, more prolific life. In addition to growing our affiliate partnerships with passive income opportunities, we aim to identify areas you are interested in learning more about, practices you are keen to adopt, and any challenges you face.

We’ll use these insights to guide the development of content, such as webinars and blog articles, that will help educate, entertain, and empower “A Future So Bright” Collective members on sustainable living topics.

WHAT LESS MEAT CONSUMPTION CAN DO FOR THE PLANET

For my 16th birthday (many decades ago), my family treated me to a fancy steakhouse dinner to celebrate. After consuming the brown and pink mass of flesh, I wondered to myself - 'what's all the hoopla about this piece of meat? That was the last steak I ever had. This post is certainly not to condemn meat eaters as I still like an occasional well-seasoned air-fried chicken wing or blackened salmon steak. Just a little awareness-building feature. Let me know your thoughts.

Maria Dowd - the visionary force behind Dowd Solar Group, a leading renewable energy firm in Southern California. Specializing in solar solutions - including solar panels, onsite battery storage, and commercial EV charging stations - Dowd Solar Group partners with Current Energy to deliver renewable energy systems to both residential and commercial property owners.

Her work is driven by a commitment to environmental equity, community empowerment, and the long-term health and economic benefits afforded to families and business owners who conscientiously transition to solar and reduce their carbon footprints. A native Californian, Maria is deeply invested in the region's future. Through her efforts, she helps property owners unlock the potential of on-site electricity generation and reduce their dependence on costly fossil fuels. Maria guides clients to leverage federal incentives—such as tax credits and subsidies — to make solar energy accessible and financially advantageous.
